

U.S. Serial No. 10/700192
Amendment Dated February 1, 2005

Amendments to the Specification

Please replace the paragraph beginning at page 11, line 19 with the following paragraph:

Pump 42 draws urine from urine collection receptacle 12 and deposits the urine in reservoir 40. Pump 42 may be operated at varying speeds and may be controlled using a dial 48 or other device. In at least one embodiment, the pump 42 may operate between about 200 revolutions per minute (rpm) and about 300 rpm. Pump 42 may be powered by batteries, which may or may not be rechargeable, or with an alternating current (AC) power source such as power that is typically available from a public utility and supplied through a wall outlet. The pump 42 may include a safety switch 45 for preventing the pump 42 from running while the pump 42 is open and thereby exposing the cavity 46.
